

SAMPLE GUIDE:

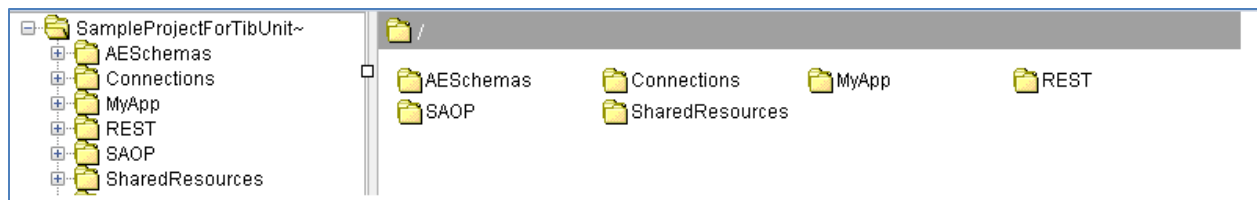

Revision History

DATE	VERSION	DESCRIPTION	AUTHOR
03-march-2016	1.0	Draft version created	Ashish Trivedi

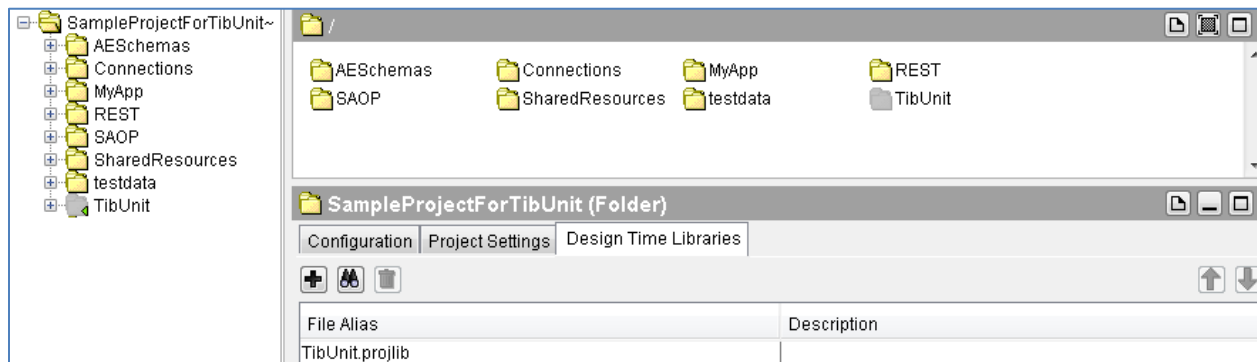

1. Created a project “SampleProjectForTibUnit”

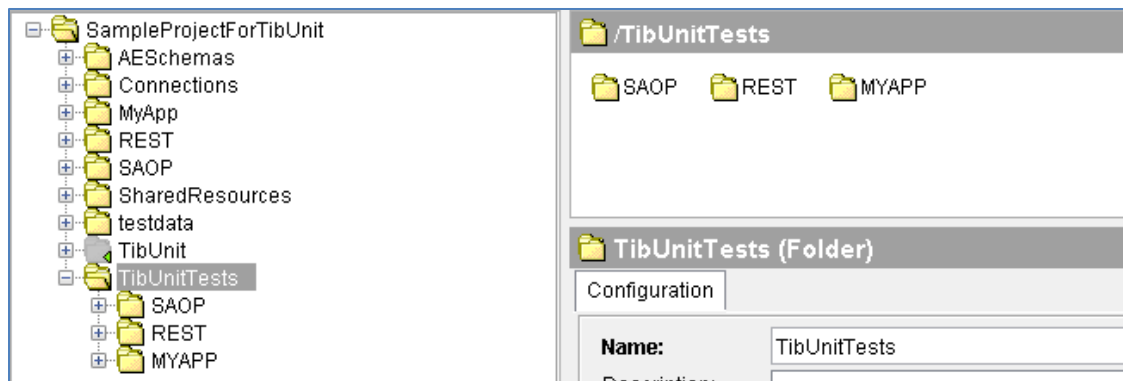

2. Created a Soap service, a rest service and some basic processes.

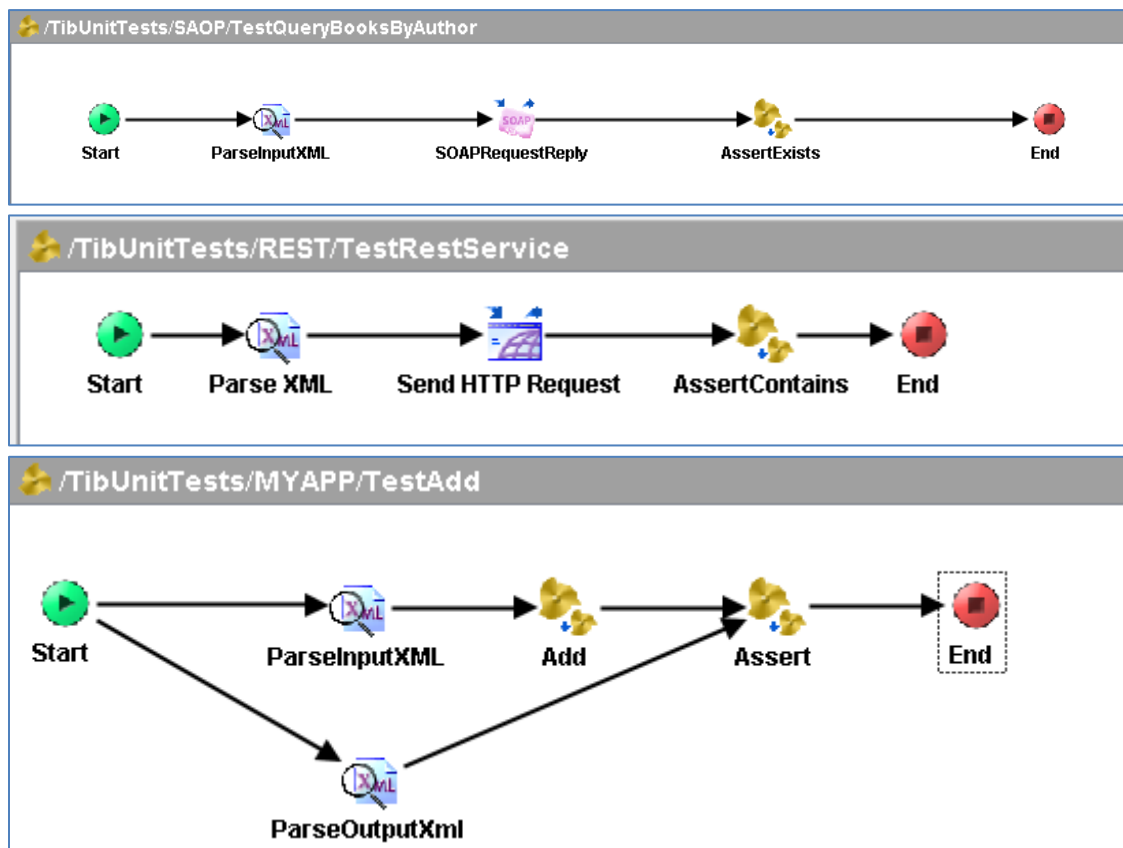

3. Imported the TibUnit Projlib.

4. Created a folder “TibUnitTests” at root level.
5. Created two folders named “testdata” and “report” in C drive.
6. Inside TibUnitTests folder, created 3 folders, One for SOAP test cases, one for REST test Cases, and one for general processes.

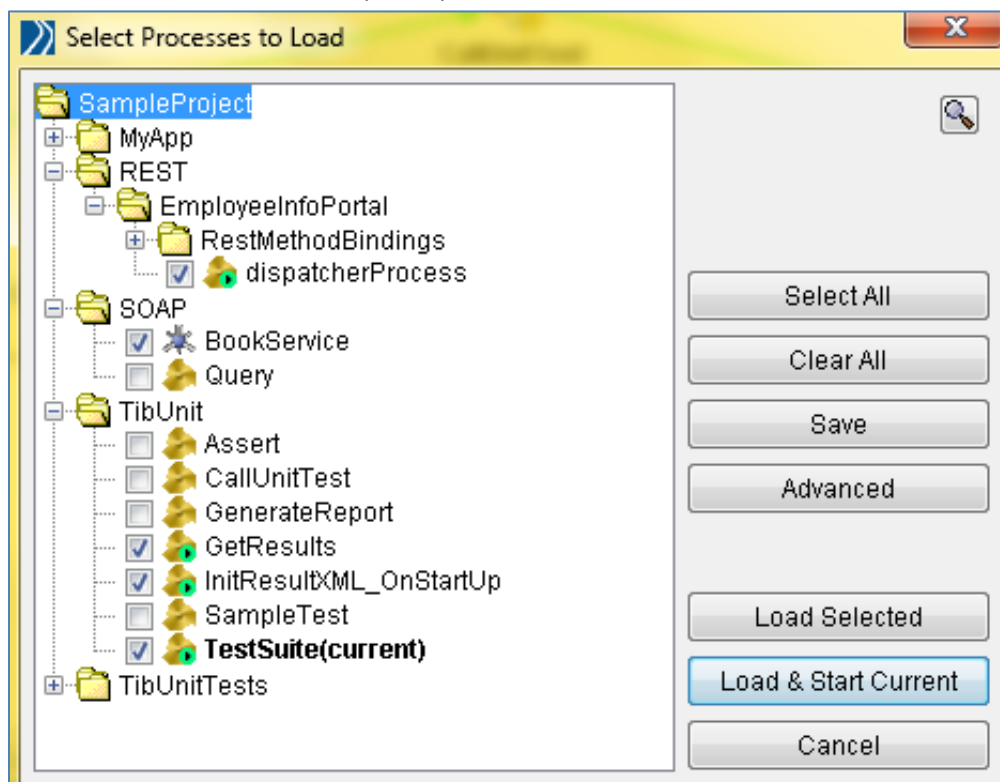

7. Created TibUnits by copying the sample test and adding implementation inside it. Calling the required processes which need to be tested, soap-request-reply to test soap project and send-http-request to test Rest service, and applied required asserts.

8. Provided the input and output files at the "testdata" folder created at step 5.

output_input_TestAdd_2	1/8/2016 1:24 PM	XML File	1 KB

9. Started the tester with the required processes started.

10. Went to "<http://localhost:8090/results>" in browser to see the report.
